 - Palo Alto Fundamentals of Cloud Security
-

Academic Projects

- **Ingredient based recipe recommendation system** | June 2023 – Dec 2023
Created a website that recommends recipes based on ingredients on hand. It also includes filters for cooking time and cooking skill. This website was made using HTML, CSS, JavaScript, JSON.

- **E-Commerce Website** | Jan 2024 – April 2024
Created an e-commerce website to sell clothes produced locally. This website features a buyer page where users can choose products and save them in their cart. It also contains a seller page where users can post their articles to sell. This website was made using HTML, CSS, PHP, SQL.
- **Metroid based Platformer Game** | June 2024 – Nov 2024
Designed 3 levels of a Metroid based platformer game in Godot Engine using premade assets and tilesets. The game contains moving platforms, multiple types of enemies with their own behaviour, multiple weapons and a boss fight at the end. This was made using GDscript.
